House Move Agent

Tell everyone you're moving: on time, in the right order, and only with your approval

14 LLM agents

27 coded tools

Built on Neuro SAN

Synthetic data only

EMEA Hackathon 2026 · Entry by associate 110737 · Varadaraj.pandurangan@cognizant.com · BFS UK

Moving home means telling 15 to 30 organisations

15–30

organisations to tell about a move

£1,000

maximum fine for not telling DVLA your new address

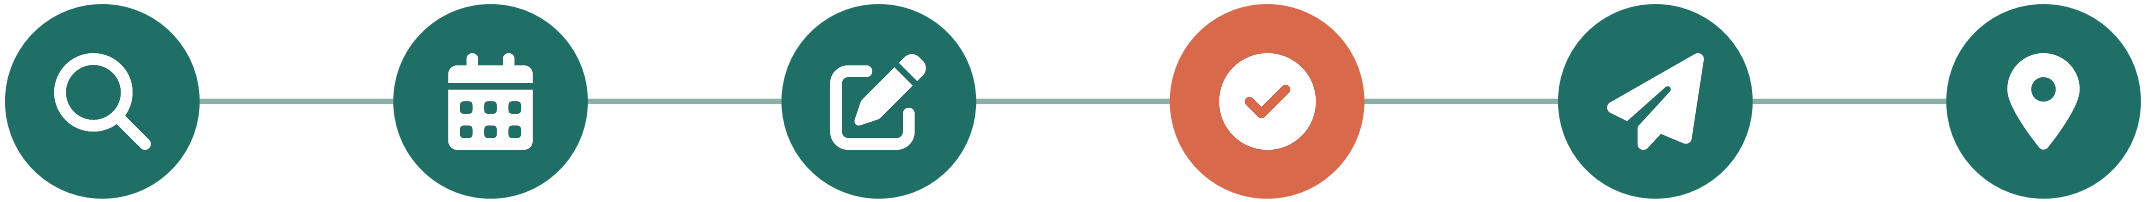

£70

council tax penalty for not notifying a move

People forget some, find out late, and then call their bank and providers to fix the gaps. Some of those gaps are legal obligations.

Sources: gov.uk (DVLA); Local Government Finance Act 1992, Schedule 3 (legislation.gov.uk)

One conversation, six steps

1. Discover

Finds who you pay from your own transactions, including the ones you forgot

2. Plan

Dated tasks from sourced rules, in UK working days

3. Draft

A ready-to-send letter or form for every organisation

4. Approve

Approve all, or approve, change or skip each one

5. Track

Sends, replans when dates move, handles replies

6. Local contacts

Nearby GPs, schools and water companies

Principle: AI where judgement is needed. Rules and code wherever a deadline, fee or legal duty is involved.

Two ways in: bank customer or standalone

Bank customer

Starts when the mortgage completion date is set

- Profile, 90 days of transactions and Direct Debit references from the bank
- Account and policy numbers filled in automatically
- The bank updates its own records directly

Standalone

Anyone moving, customer or not

- Short chat, plus a statement upload (CSV or OFX) or a list of providers
- Personal details from a secure form, encrypted at rest
- Come back with a case reference and resume code; delete on request

Same agents, same rules, same approval gate behind both doors: only where the data comes from changes.

AI moment 1: finding who you pay, and what it implies

Bank transaction	What the agents understood
`BRIGHTWATT EN DD 0034X1274`	**Brightwatt Energy** · energy supplier
`NVW WATER SVCS 1074205`	**NVW Water Services** · water company
`DVLA-VEH TAX 2274101`	**DVLA vehicle tax** · **has a car: log book and licence**
`PAWSURE LTD 4110415 PETPOL`	**Pawsure pet insurance** · **has a pet: update the microchip**
`LITTLE ACORNS NURSERY SO`	**Little Acorns Nursery** · **young child: give notice**

14 organisations found for the demo customer, including the forgotten pet insurance and a credit card. Highlighted rows are inferences a checklist cannot make. Anything below 70% confidence is asked, not assumed.

When completion slips, code replans and AI rewrites

Was

27 Nov

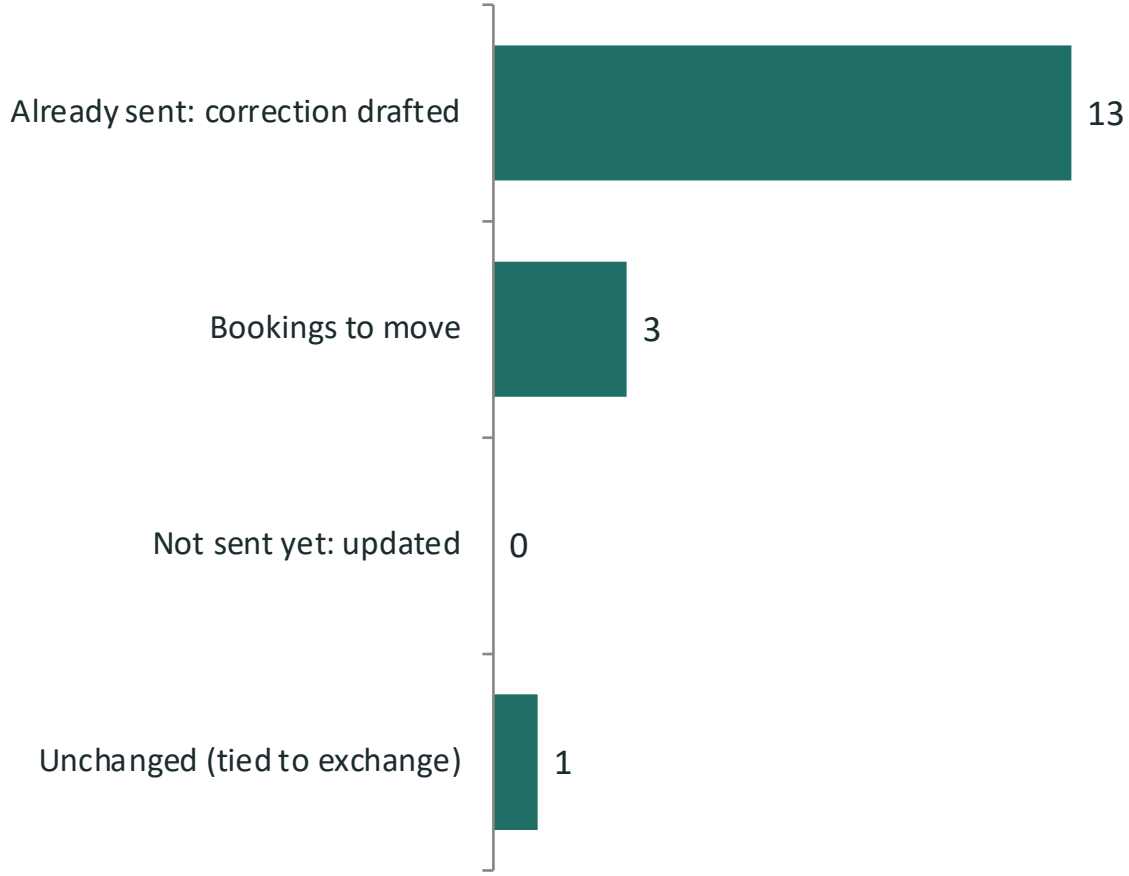

→

Now

11 Dec

- Code recomputes every date and sorts each task. Deterministic on purpose: no model works out a date.
- The comms agent writes the correction letters, which need approval again.
- The reply agent reads provider replies, such as "please confirm your meter serial" (scripted in the demo).

Live demo run: 17 tasks re-sorted

AI only where it adds value

Rules and code

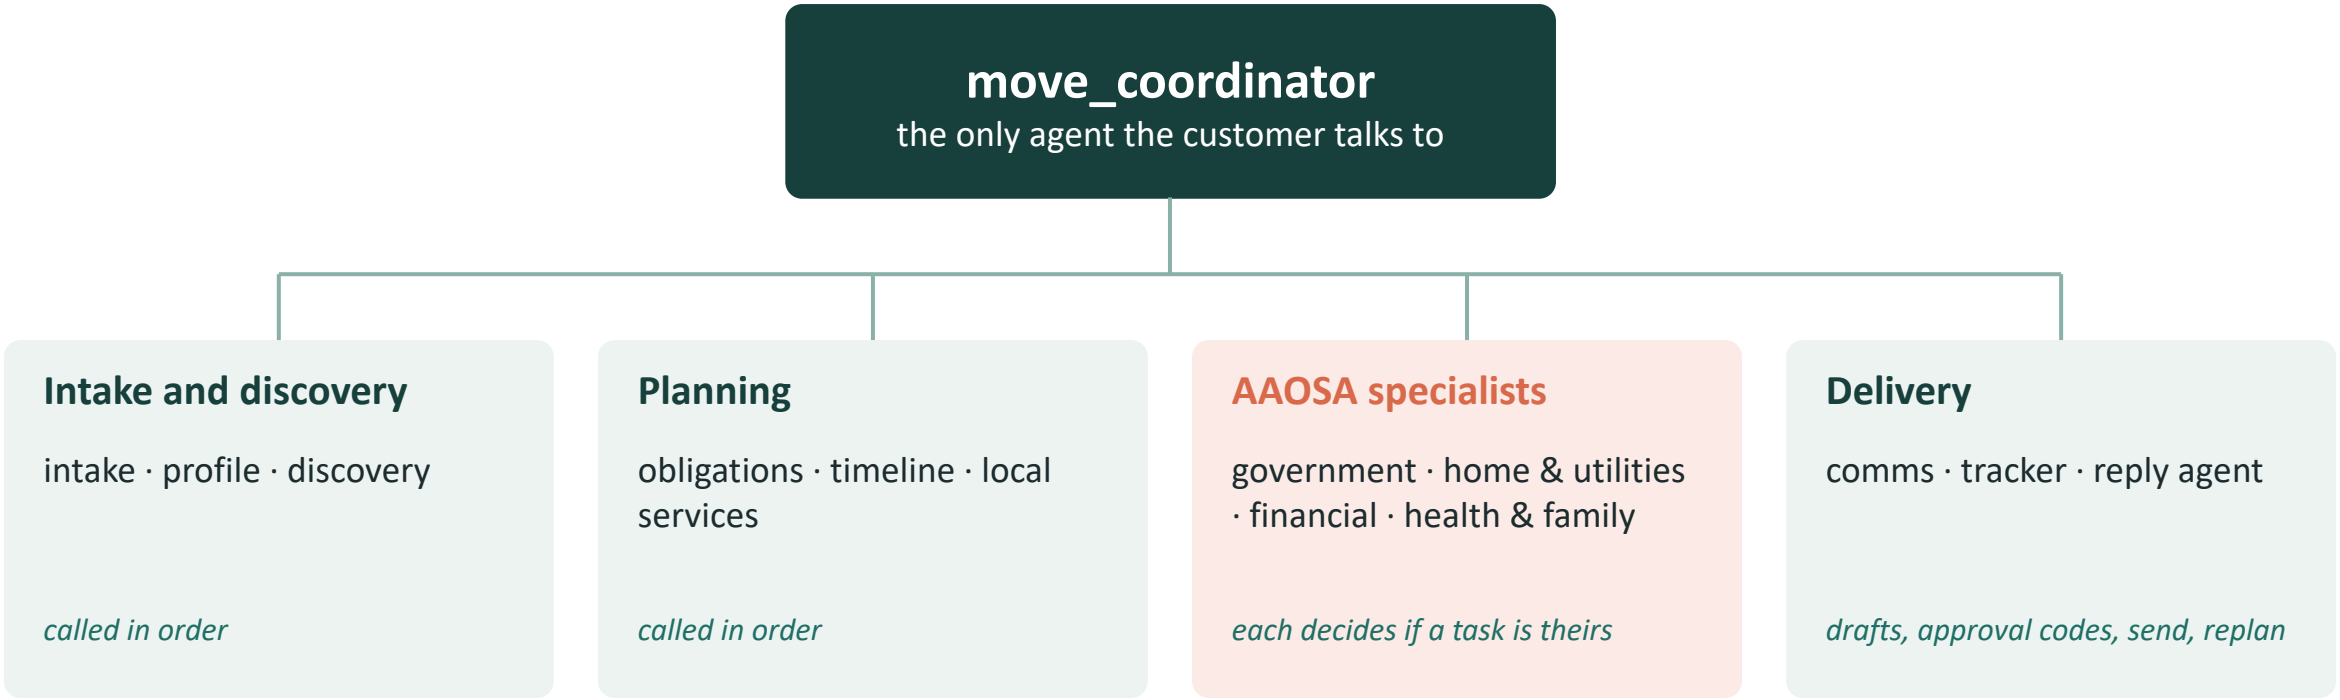

- Which obligations apply: 25 rules, each with a source
- Deadlines in UK working days, per nation
- Legal flags and penalties
- The approval gate
- What a date change means for each task
- Audit log, encryption, statement parsing

LLM agents

- Messy descriptors into providers and life facts
- Free-text answers into structured facts
- Edge cases: letting the old home, joint owners
- A personal draft for each organisation
- Reading provider replies
- Explaining the plan in plain English

The LLM can't invent a deadline, fee or legal duty, and it can't quietly drop one either.

14 agents on Neuro SAN, 27 coded tools

State lives on the server. sly_data carries only a signed session token; every coded tool reloads the case from an encrypted SQLite store, checks who owns it, and saves it back. The LLM sees redacted views and {{placeholders}}.

Trust is built into the code, not the prompt

The server holds the state

The client holds only a signed session; any state it sends is discarded

You open only your own case

Signed sessions, ownership checks, unguessable case IDs

Names and numbers stay out of the LLM

Drafts use {{placeholders}} that code fills in at send time

Encrypted at rest

Details, statements and plans encrypted; keys kept apart

Statements kept out of the chat

Uploaded to your own folder, read once, then deleted

Consent the LLM cannot fake

Approve in your signed-in app, or type a one-time code yourself

Red-teamed, then hardened

An approval code could be sprayed

Found One pasted message listing every 6-digit number could confirm a code issued in the same turn, unseen.

Fixed Exactly one code per message, and a turn's message keeps its first timestamp. Two tests replay the attack.

A legal duty could vanish silently

Found The model could pass "no licence" and the DVLA rule disappeared without a word.

Fixed A false fact the payments or start form contradict becomes a question; every excluded legal duty is shown with its reason. Three tests.

Known limits, on the roadmap: the server logs the session token with each request; postcodes reach the model for council lookups.

The app always shows the next step

Started | Plan ready | **Drafts ready** | Approved | Sent | Follow-up | Done

Sent for you

- Complete emails with every reference known
- Account, policy and licence numbers filled in from Direct Debits
- Delivered to the organisation; replies come back here
- The bank updates its own records

Ready for you to send

- Forms, calls, or details only you have
- Tap the letter: filled in with your details as you open it
- What to add, then Copy text and Open the organisation's page
- Tap "I've sent it" and the plan shows it as sent

Approve all covers routine letters only. Legal duties are approved one by one, and a reworded letter needs approving again.

Works across all four UK nations

England

Council tax, a water company for the old and new home, NHS GP and school search

Wales

Close the Welsh water account; Welsh GP and school finders signposted

Scotland

Water billed with council tax, Scottish bank holidays, Scottish GP finder

Northern Ireland

Domestic rates through Land & Property Services; NI licence route via DVLA

Tested routes: Leeds → Harrogate, Halifax → Chelmsford, Glasgow → Darlington, Cardiff → Edinburgh, Belfast → Leeds, and a standalone Bristol → Nottingham move.

Who to contact near the new home

GP practices

NHS Organisation Data Service, live

- Burton Croft Surgery · 0.2 km
- Laurel Bank Surgery · 0.6 km
- Meanwood Health Centre · 1.3 km

Schools

Department for Education, 26,483 schools

- Nearest schools for each child's age
- Phone, website and distance
- Council admissions and childcare links

Water

Ofwat's official area maps, live

- Yorkshire Water, confirmed
- Water and sewerage named separately
- Scotland and NI: no account needed

Live example: Belfast → Leeds LS6 3BQ. Distance is not catchment: the list says how to check practice areas and school admissions.

Evaluated against ground truth, not just tested

157

unit tests, all passing

94%

line coverage

12

live AI conversations checked against ground truth

21/25

rules verified against official sources

1

cross-customer data leak caught by the evaluations, and fixed

- Five synthetic customers, each with its providers and life facts written down in advance.
- Discovery must find what the payments show; the plan must mark exactly the legal duties; drafts must state no date or fee the rules do not; a changed letter must need approving again.
- Facts are checked by keyword, judgement by an LLM judge. Lint clean: ruff and pylint 10/10.

Why a bank, and what we would measure

Why a bank, not a moving app

- Sees who the customer pays
- Knows the completion date
- Already trusted with the data

Fewer servicing contacts

address changes and moving queries

Satisfaction at completion

and Consumer Duty evidence

Home insurance conversion

an opt-in offer when it is needed

Tasks done before due

fewer missed legal obligations

Customer time saved

from a task-time study

Retention at product transfer

long-term relationship value

Targets to measure in a pilot, not claimed results.

Roadmap

Open Banking

Transactions and Direct Debits from any UK bank, with consent

Pilot

Consenting mortgage customers; address update and home insurance live

Partner APIs

Energy, water and broadband providers

gov.uk links

Official change-of-address services as they open up

New journeys

Business premises moves, bereavement, marriage, a new baby

Production work: Consumer Duty review, authority to act for the customer, data-sharing agreements, managed encryption keys, short-lived sessions kept out of server logs, and model risk governance.

Let's see it

Live demo: the House Move app and nsflow

Thank you
